                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               -Xbal fragment of plasmid pT4B containing the sCD4 sequence. The PCR product was ligated to an Xbal-Sall fragment containing the sequence encoding human acid phosphatase (HAP) lysosomal targeting protein (PCR amplified from a human liver lambda gp10 library using primers AAQ38752 and AAQ38753). The resulting fusion sequence sCD4-HAP can be used to interfere with the normal function of HIV and to direct the virus to lysosomes. (Updated on 25-MAR-2003 to correct PN field.)

                                                                    The present sequence is that of DNA encoding fusion protein CD4Mmu (see AAB19509) comprising the extracellular portion of CD4, which binds to HIV gp120, linked at its C-terminus to a human IgM heavy chain polypeptide. To obtain the construct, DNA encoding CD4 was linked to IgM DNA at the Mst2 site upstream of the CH1 region. A plasmid containing this genetic construct is deposited in Escherichia coli MC1061/P3 as ATCC 67809. Fusion protein CD4Mmu and a nucleic acid encoding it are claimed. Also claimed are a vector comprising the nucleic acid, and a method of producing the fusion protein may further comprise a therapeutic agent, radiolabel or NMR inaging agent. The fusion protein can be administered to an animal (including humans) for treatment of HIV or SIV infection, and can also be used in assays for HIV or SIV, imaging and tissue stains. IgM fusion proteins such as CD4Mmu provide complement-mediated immunity
                                                                                                                                                                                                                                                                                                                                                                                                           22-JAN-1988;

                          of human
                          immunodeficiency virus.
```

This invention describes a novel nucleic acid (I) encoding a fusion protein comprising a DNA sequence encoding amino acids 1-173 of CD4 (II) and a DNA sequence encoding a mino acids 1-18 heavy or light chain (III). The products pf the invention have anti-human immunodeficiency virus (HIV) activity and are capable of binding to gp120. The fusion protein is useful for treating human immunodeficiency virus (HIV) or simian immunodeficiency virus (SIV). This sequence encodes the fusion protein CD4Mg which is constructed from CD4 linked to human the fusion protein CD4Mg which is constructed from CD4 linked to human IGM upstream of the CH1 region

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention provides a fusion gene encoding a fusion protein that comprises an extracellular CD4 DNA sequence or its fragment which binds to HIV gp120 when fused to an immunoglobulin (Ig) chain and the DNA sequence of an Ig heavy or light chain, where the DNA sequence encoding the variable region has been replaced with the DNA sequence which encodes extracellular CD4 or its gp120 binding fragment. The fusion protein is capable of being secreted. The fusion proteins are useful for treating HIV or SIV infections in animals, preferably humans. They are also useful infections in humans. The present sequence represents the DNA which encodes the fusion protein CD4Mmu where the CD4 is linked to human IgG1 at the Mst2 site upstream of the CH1 region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 1714 BP; 411 A; 503 C; 467 G;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Example 1; Page 47-53; 89pp; English.

                                              The present invention describes a new composition comprising an antise oligonucleotide (ON) with low adenosine (up to 15%), which targets nucleic acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have antiinflammatory, antiallergic, antiasthmatic, cytostatic and analgesic activities. The compositions a useful for the treatment of diseases associated with inflammation, impaired airways, including lung disease and diseases whose secondary effects afflict the lungs of a subject. They can be used for treating the first the lungs of a subject. They can be used for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human, adenosine receptor, low adenosine antisense oligonucleotide; phosphorothicate; impaired respiration; inflammation; allergy; phosphorothicate; impaired respiration; infibitor; antiinflammatory; allergic disease; bronchoconstriction; inhibitor; antiinflammatory; lambilergic; antiasthmatic; cytostatic; analgesic; impaired airway; lung disease; ischaemic condition; pulmonary vasoconstriction; asthm respiratory distress syndrome; pain; cystic fibrosis; emphysema; pulmonary hypertension; chronic obstructive pulmonary disease; COPD;

The reduction of the adenosine content of the ONs reduces side effects. The A-containing ONs break down with the release of deoxyadenosine which activates adenosine receptors causing bronchoconstriction and inflammation. AAA32313 to AAA35312 represent the nucleotide sequences given in the sequence listing from the present invention, which correspond to SEQ ID NO:1 to 2815, and then the last 185 sequences are also called SEQ ID NO:1 to 185, but the sequences differ from the previously named sequences. SEQ ID NO:11 to 1680 (AAA32323 to AAA33992) are specifically claimed ONs from the present invention. N.B. Sequences given in the disclosure of the present invention do not match up with their corresponding SEQ ID NO: sequences given in the sequence

Low adenosine (A) content antisense oligonucleotides which do not trigger adenosine receptors during metabolism, useful e.g. for treating cancers and respiratory obstructions.

Disclosure; Page 1329; 1592pp; English.

The present invention describes low adenosine (A) content antisense coligonucleotides and compositions (I) comprising them. In the antisense (C) coligonucleotides the A is replaced by a 'Universal' or alternative base. (C) can have respiratory, bronchodilator, antiinflammatory, analgesic, cimmunosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (I) can be used to down-regulate the compression and or activity of target polypeptides associated with coling/respiratory disorders and malignancies, such as stimulating and cativating peptide factors and transmitters, transcription factors, immunoglobulins and antibodies, antibody receptors, cytokines and chemokines, endogenously produced specific and non-specific enzymes, binding proteins, adenosine receptors, bradykinin receptors, cytokine and creceptors, cytokine and cytostation, receptors, cytokine and creceptors, cytokine and cytostation, cytokine and cytostation receptors, cytokine and cytostation and peripheral nervous and non-nervous system peptide receptors, cytokine and cytostation, cytokine and cytostation creceptors, cytokine and cytostation and malignancy associated proteins. The antisense oligonucleotides may be used in this way to treat disorders and cytostation, cytokine and cytostation, pub

An antibody for the treatment or prevention of HIV-infection comprises gp120 portion which binds to DC-SIGN or is exposed upon gp120 binding of DC-SIGN due to concomitant conformational change. WPI; 2001-602565/68 Of a

Disclosure; Page 121-122; 131pp; English.

The specification describes an antibody which is specific for an antigenic fragment of gpl20. This antigenic fragment binds to DC-SIGN or is exposed upon gpl20 binding of DC-SIGN due to concomitant conformational change. DC-SIGN is a receptor that is specifically expressed on dendritic cells and facilitates infection of T lymphocytes with HIV. DC-SIGN is identical to a HIV-1 gpl20-binding C-type lectin. I -SIGN binds ICAM-3 (which is expressed constitutively on T lymphocytes) with high affinity. The antibody of the invention inhibits the trans enhancement of HIV entry into a T cell or macrophage facilitated by dendritic cells. The antibody is useful to treat or prevent HIV infection. The present sequence represents a human polynucleotide, which is used in the course of the invention which ç g

                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a novel pharmaceutical composition, which has a CC first active agent comprising an oligonucleotide antisense to the CC initiation codon, coding region, 5' or 3' end genomic flanking regions, CC 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of junctions of genes encoding a polypeptide associated with lung and/or CC nasal airway dysfunction and a second active agent comprising an CC antiinflammatory steroid and ubsquinone. A composition of the invention CC immunosuppressive, and cytostatic activity. The composition may have a CC immunosuppressive, and cytostatic activity. The composition may have a CC immunosuppressive, and cytostatic activity. The composition may have a CC immunosuppressive, and cytostatic activity. The composition may have a CC or enhancing the prophylactic or malignant disease or condition, also CC for enhancing the prophylactic or therapeutic respiratory effect of an antiinflammatory steroid in a subject, for reducing or depleting levels of adenosine CC for reducing sensitivity to adenosine, reducing levels of adenosine conceptor, producing bronchodilation, increasing levels of ubiquinone or CC lung surfactant in a subject's tissue, or treating bronchoconstriction, CC lung inflammation, lung allergies, or a respiratory disease or condition. CC Note: The sequence data for this patent is not represented in the printed car firm, who distance on the prophylactic or the sequence or condition.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            315
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             255
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             195
```

The invention relates to a composition comprising a plurality of cDNAs CC for detecting the altered expression of genes in an immunological CC response. The invention also relates to a method of diagnosing or comprising the treatment of an immunopathological condition in a sample, CC monitoring the treatment of an immunopathological condition in a sample, comparising obtaining nucleic acids from a sample, contacting the nucleic comparising of the sample with an array comprising the plurality of cDNAs under comprising the plurality of cDNAs under conditions to form one or more hybridisation complexes, detecting the conditions of the sample, where an altered level of the detected hybridisation complexes with the level of hybridisation complexes correlates with the presence of an immunopathological condition. Also disclosed are an expression profile comprising a microarray and a plurality of detectable complexes and a comprising a microarray and a plurality of polynucleotide probes. The cDNAs concentration immunopathology, such as Crohn's disease. The microarray can be used in the diagnosis of an immunopathology, such as Crohn's disease, asthma, concentrative colitis, hypereosinophilia, irritable bowel syndrome, consecutiving agents for the treatment of the diseases. The microarray may console used in drug discovery and development, toxicological and consecutive consecutive studies, forensics or pharmacogenomics. The composition carcinogenicity studies, forensics or pharmacogenomics. The composition convergence had a bundan cDNA of the printed specification but was obtained in electronic format directly convergence had a suppose that directly are printed as a user of convergence had a suppose that directly convergence and a suppose that directly are the printed specification but was obtained in electronic format directly convergence and a suppose that direc from USPTO at seqdata.uspto.gov/sequence.html. Claim 1; SEQ ID NO 1013; 50pp; English. diagnosing and treating an immunopathology, e.g. Crohn's disease, asthma or osteoarthritis.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Score

Sequence 5 AA;	A dispersible apo A-I/B-100 fusion polypeptide is claimed which a first AA sequence of apo A-I (see AAR72605) and that includes AA sequence positions 120-135 (see AAR72606). The two sequences operatively linked. An exemplary linking sequence is AAR72707 whencoding DNA can be ligated between an apo A-I and a B-100 encodes sequence.	PS Disclosure; Col 18; 41pp; English.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The inventors claim a portion of the polypeptide contg. apo B-100 that immunoreacts with antibodies secreted by the hybridoma MB47 having ATCC Accession No. 8746. Polypeptides specifically claimed include residues 217-297, 216-310, 216-331, 216-352, 216-377, 1-377, 205-297, 173-297, 140-297. DNA sequences encoding the polypeptides are also claimed. Also claimed are a fusion polypolypeptide that contains: (a) a first amino acid residue sequence up to 250 residues in length that includes residues 120-135 of apo A-I, (b) a second amino acid residue sequence up to 375 residues in length that includes residues 217-297 of apo B-100 and DNA encoding it. (Updated on 25 MAR-2003 to correct PN field.) (Updated on 25
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Polypeptide mimic of native apo B-100 and native assays for LDL and HDL in plasma samples.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Linking sequence whose encoding DNA can be ligated between an and a B-100\text{-encoding} DNA sequence.

The scFv may be derived from a monoclonal antibody, e.g. MAb FRP5, and forms the ligand domain of a multidomain protein (see also AAR95053 and AAR95056-58) that is used with an effector nucleic acid in a novel nucleic acid transfer system suitable for gene therapy. The ligand domain has a target cell recognition function and allows cellular internalization of the multidomain protein/nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Nucleic acid transfer system; gene transfer; cell targeting; multidomain protein; vector; single chain antibody.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a novel haematopoietic protein (HP) comprising CC an amino acid (AA) sequence of formula; R1-L1-R2; R2-L1-R1; R1-R2; or R2-CC R1; where R1 and R2 are independently selected from: (I) a modified human CC granulocyte-colony stimulating factor (HG-CSF) AA sequence; (II) a cc modified human interleukin-3 (hIL-3) AA sequence; (II) a modified human CC cmpl ligand; and a colony stimulating factor (CSF); and L1 = a linker CC capable of linking R1 to R2. This sequence represents an example of a CC linker used to construct the proteins of the invention. Vectors CC comprising the nucleic acid molecules are useful for the recombinant CC production of HP. The nucleic acid molecules are useful in gene therapy. CC The HP's are useful for stimulating the production of haematopoietic CC cells in patients, selective ex vivo expansion of stem cells and for C reatment of haematopoietic directive include leukopaenia, neutropaenia, aplastic anaemia and construct of the colon cell activation and growth before infusion into the construct.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    angiogenic and/or anti-tumor activity. The multifunctional protein may exhibit useful properties such as having similar or greater biological activity when compared to a single factor or by having improved half-life or decreased adverse side effects, or a combination of these properties. The proteins can be used for treating an angiogenic-mediated disease, e.g. cancer, diabetic retinopathy, macular degeneration, or arthritis. They can also be used for inhibiting the production of tumor cells (Characteristic of lung, breast, ovarian, prostate, pancreatic, gastric, colon, renal, bladder cancers; melanoma, hepatoma, sarcoma and lymphoma) in a patient and for inhibiting tumor growth. AAV02125-32 represent poptide linkers used to make the multifunctional proteins of the
                                 This invention describes a novel method for prolonging the in vivo effect of type I interferon (IFN) by administering IFN as a complex (A) with a subunit (I) of the human interferon alpha/beta receptor (IFNAR). The product of the invention has antiviral, anticancer, immunomodulatory, anti-arthritic and antidiabetic activity. (A) have the antiviral, anticancer and immunomodulating activities of IFN, e.g. for treating hepatitis and other viral infections, hairy cell leukemia, Kaposi's sarcoma, multiple myeloma and other cancers, multiple sclerosis, rheumatoid arthritis, mysathenia gravis, diabetes, acquired immune deficiency syndrome and lupus. When complexed in (A), the storage life of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  IFNAR2; IFN-beta; type I interferon; IFNAR/IFN complex; IFN; antiviral; human interferon alpha/beta receptor; anticancer; immunomodulatory; anti-arthritic; antidiabetic; treatment; hepatitis; viral infection; hairy cell leukemia; Kaposa's sarcoma; multiple myeloma; cancer; lupus; diabetes; multiple sclerosis; rheumatoid arthritis; myasthenia gravis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ន្តន្តន្ត
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ś
                                                This sequence represents a novel single-chain molecule (I) that binds CC multiple antigens and comprises two variable domains of heavy CC immunoglobulin chains (VH), having specificities A and B and two variable domains of light chains (VH), also with specificities A and B. The CC domains are provided as two VH-VL constructs which are attached via a peptide (P). Any VH and VL may be replaced by their functional fragments. CC The products of the invention have anticancer, antiviral, antibacterial, antimalarial and antiinflammatory activity. (I) are used to treat, CC prevent or diagnose tumors (e.g. as tumor vaccines), autoimmune diseases and inflammation (e.g. transplant rejection and arthritis) blood CC disorders (e.g. of the coagulation and/or circulatory systems, such as anemia, leucopenia, thrombocytopenia and hypertension), nervous system CC antimalarion (e.g. include a fusogenic and hypertension) reproduced simply and in predominantly homogeneous form, in a wide cvariety of hosts, either in secreted or membrane-bound forms. This cc sequence represents a VH-VL domain linker peptide which is used to construct the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches

                                                                                                                                                                                                                                                                                        The present sequence represents a linker used to join the avb3 antagonist cand the metastasis-associated receptor ligand, in the pharmaceutical compounds of the invention. These compounds are dual avb3 receptor/metastasis-associated receptor ligands, and inhibit angiogenesis and thus proliferation of (cancer) cells. One component binds to the avb3 receptor and the other to a metastasis-associated receptor. The avb3 antagonists may also be conjugated to anti-angiogenic proteins, such as IFW-alpha and its derivatives. The compounds are used to treat angiogenesis-related disorders (mediated by the avb3-integrin), specifically cancer (of lung, breast, ovary, prostate, stomach, colon, kidney or bladder, also melanoma, hepatcoma, sarcoma and lymphoma), cartificial and macular degeneration, and also diabetic retinopathy, hemangioma, psoriasis, osteoporosis, thrombosis, angina, atherosclerosis etc. The compounds may also be useful as antiviral, antibacterial and
